A chronology of Allied combat operations in Vietnam

This volume is the first in a series of chronologies of Allied combat operations conducted during the Vietnam War from 1965 to 1973, interspersed with significant military events and augmented with a listing of US and FWF units arrival and departure for each months. It is based on a chronology prepared for the Vietnam Combat Operations series of scenarios for *The Operational Art of War III* I've been working on for more than three years, completed with additional information obtained in primary source documents. It does not pretend to be a comprehensive listing, data are scarcely available when dealing with South Vietnamese or Korean operations, for example.

Each operation is presented in the following format:

Date Operation: name of the operation, when available *Location*: population centers, landmarks, province. *Type*: type of operation, when available. *Controlling headquarters*: when available. *Task organization*: friendly units involved, when available. *Intelligence*: enemy situation and forces, when available. *Execution:* brief description, when available. *Results*: friendly and enemy casualties, when available.

A glossary of acronyms and abbreviations is available on page 19.
